

Exam Formula Sheet

1 Epi 202: Probability

$$\begin{aligned}\text{Var}(\tilde{a} \cdot \tilde{X}) &= \text{Var}\left(\sum_{i=1}^n a_i X_i\right) \\ &= \tilde{a}^\top \text{Var}(\tilde{X}) \tilde{a} \\ &= \sum_{i=1}^n \sum_{j=1}^n a_i a_j \text{Cov}(X_i, X_j)\end{aligned}$$

$$\mathbb{E}[Y] = \mathbb{E}[\mathbb{E}[Y \mid X]]$$

$$\mathbb{E}[Y \mid Z] = \mathbb{E}[\mathbb{E}[Y \mid X, Z] \mid Z]$$

$$\text{Var}(Y) = \mathbb{E}[\text{Var}(Y \mid X)] + \text{Var}(\mathbb{E}[Y \mid X])$$

$$\text{Cov}(Y, Z) = \mathbb{E}[\text{Cov}(Y, Z \mid X)] + \text{Cov}(\mathbb{E}[Y \mid X], \mathbb{E}[Z \mid X])$$

2 Epi 203: Statistical inference

$$\mathcal{L}(\theta) \stackrel{\text{def}}{=} p(\tilde{X} = \tilde{x} \mid \Theta = \theta)$$

$$\ell \stackrel{\text{def}}{=} \log\{\mathcal{L}(\tilde{x} \mid \theta)\}$$

$$\ell' \stackrel{\text{def}}{=} \frac{\partial}{\partial \theta} \ell(\tilde{x} \mid \theta)$$

$$\ell'' \stackrel{\text{def}}{=} \frac{\partial}{\partial \tilde{\theta}} \frac{\partial}{\partial \tilde{\theta}^\top} \ell(\tilde{x} \mid \tilde{\theta})$$

$$\ell''_{ij} = \frac{\partial}{\partial \theta_i} \frac{\partial}{\partial \theta_j} \ell(\tilde{X} = \tilde{x} \mid \tilde{\theta})$$

$$I \stackrel{\text{def}}{=} -\ell''(\tilde{x} \mid \tilde{\theta})$$

$$\mathcal{J} \stackrel{\text{def}}{=} \mathbb{E}[I(\tilde{x} \mid \theta)]$$

$$\hat{\theta}_{ML} \sim \mathcal{N}\left(\theta, [\mathcal{J}(\tilde{\theta})]^{-1}\right)$$

For one parameter θ_k :

$$\text{CI}_{1-\alpha}(\theta_k) = [\hat{\theta}_k \pm z_{1-\frac{\alpha}{2}} \widehat{\text{SE}}(\hat{\theta}_k)]$$

$$Z_k \stackrel{\text{def}}{=} \frac{\hat{\theta}_k - \theta_{k,0}}{\widehat{\text{SE}}(\hat{\theta}_k)} \sim \text{N}(0, 1) \quad \text{under } H_0 : \theta_k = \theta_{k,0} \quad z_k = \text{observed } Z_k$$

$$\begin{aligned} p\text{-value} &= 2 \Pr(|Z| \geq |z_k|), \quad Z \sim \text{N}(0, 1) \\ &= 2(1 - \Phi(|z_k|)) \end{aligned}$$

3 Sta 108: Linear regression

$$t_k \stackrel{\text{def}}{=} \frac{\hat{\beta}_k - \beta_{k,0}}{\widehat{\text{SE}}(\hat{\beta}_k)} \sim t_{n-p} \quad \text{under } H_0 : \beta_k = \beta_{k,0} \quad t_k^{\text{obs}} = \text{observed } t_k$$

$$\text{CI}_{1-\alpha}(\beta_k) = [\hat{\beta}_k \pm t_{n-p} \left(1 - \frac{\alpha}{2}\right) \widehat{\text{SE}}(\hat{\beta}_k)]$$

Let $T_{n-p} \sim t_{n-p}$.

$$\begin{aligned} p\text{-value} &= 2 \Pr(|T_{n-p}| \geq |t_k^{\text{obs}}|) \\ &= 2(1 - F_{t_{n-p}}(|t_k^{\text{obs}}|)) \end{aligned}$$

$$\text{CI}_{1-\alpha}(\mu(\tilde{x}^*)) = [\hat{\mu}(\tilde{x}^*) \pm t_{n-p} \left(1 - \frac{\alpha}{2}\right) \widehat{\text{SE}}(\hat{\mu}(\tilde{x}^*))]$$

Y^* denotes a new observation (not in the training data), with corresponding covariate pattern $\tilde{x}^*$.
Let $\hat{Y}^* \stackrel{\text{def}}{=} \hat{\mu}(\tilde{x}^*)$.

$$\text{PI}_{1-\alpha}(Y^*|\tilde{x}^*) = [\hat{Y}^* \pm t_{n-p} \left(1 - \frac{\alpha}{2}\right) \widehat{\text{SE}}(Y^* - \hat{Y}^*)]$$

$$\widehat{\text{SE}}(Y^* - \hat{Y}^*) = \hat{\sigma} \sqrt{1 + (\tilde{x}^*)^\top (\mathbf{X}'\mathbf{X})^{-1} \tilde{x}^*}$$

$$\text{Var}(Y^* - \hat{Y}^*) = \sigma^2 (1 + (\tilde{x}^*)^\top (\mathbf{X}'\mathbf{X})^{-1} \tilde{x}^*)$$

Let $\hat{\Sigma} \stackrel{\text{def}}{=} \widehat{\text{Var}}(\hat{\beta}) = \hat{\sigma}^2 (\mathbf{X}'\mathbf{X})^{-1}$.

$$\widehat{\text{Var}}(\hat{\mu}(\tilde{x})) = \tilde{x}^\top \hat{\Sigma} \tilde{x}$$

Let $\Delta\mu(\tilde{x}, \tilde{x}^*) = \mu(\tilde{x}) - \mu(\tilde{x}^*)$, and let $\Delta\tilde{x} = \tilde{x} - \tilde{x}^*$; then:

$$\widehat{\text{Var}}(\widehat{\Delta\mu}(\tilde{x}, \tilde{x}^*)) = \Delta\tilde{x}^\top \hat{\Sigma} \Delta\tilde{x}$$

4 Epi 204: Generalized linear models

Generalized linear models have three components:

1. The **outcome distribution** family: $p(Y|\mu(\tilde{x}))$
2. The **link function**: $g(\mu(\tilde{x})) = \eta(\tilde{x})$
3. The **linear component**: $\eta(\tilde{x}) = \tilde{x} \cdot \beta$

$$\left[\pi \stackrel{\text{def}}{=} \Pr(Y = 1 | \tilde{X} = \tilde{x}) \right] \xrightleftharpoons[\frac{\omega}{1+\omega}]{\frac{\pi}{1-\pi}} \left[\omega \stackrel{\text{def}}{=} \text{odds}(Y = 1 | \tilde{X} = \tilde{x}) \right] \xrightleftharpoons[\exp\{\eta\}]{\log\{\omega\}} \left[\eta(\tilde{x}) \stackrel{\text{def}}{=} \text{log-odds}(Y = 1 | \tilde{X} = \tilde{x}) \right]$$

$\overbrace{\hspace{15em}}^{\text{logit}(\pi)}$
 $\underbrace{\hspace{15em}}_{\text{expit}(\eta)}$

Figure 1: Diagram of logistic regression link and inverse link functions

$$\theta(\tilde{x}, \tilde{x}^*) = \exp\{(\Delta\tilde{x}) \cdot \tilde{\beta}\}$$

4.1 Estimates of odds ratios from 2x2 contingency tables

$$\hat{\theta} = \frac{ad}{bc}$$

4.2 Survival analysis

4.2.1 Probability distribution functions

Table 1: Probability distribution functions

Name	Symbols	Definition
Probability density function (PDF)	$f(t), p(t)$	$p(T = t)$
Cumulative distribution function (CDF)	$F(t), P(t)$	$P(T \leq t)$
Survival function	$S(t), \bar{F}(t)$	$P(T > t)$
Hazard function	$\lambda(t), h(t)$	$p(T = t T \geq t)$
Cumulative hazard function	$\Lambda(t), H(t)$	$\int_{u=-\infty}^t \lambda(u) du$
Log-hazard function	$\eta(t)$	$\log\{\lambda(t)\}$

4.2.2 Diagram of survival distribution function relationships

$$\begin{aligned}
 f(t) &\xleftarrow[\frac{f(t)\lambda(t)}{S(t)}]{-S'(t)} S(t) \xleftarrow[\exp\{-\Lambda(t)\}]{\exp\{-\Lambda(t)\}} \Lambda(t) \xleftarrow[\int_{u=0}^t \lambda(u) du]{\int_{u=0}^t \lambda(u) du} \lambda(t) \xleftarrow[\exp\{\eta(t)\}]{\exp\{\eta(t)\}} \eta(t) \\
 f(t) &\xrightarrow[\int_{u=t}^{\infty} f(u) du]{f(t)/\lambda(t)} S(t) \xrightarrow[-\log S(t)]{-\log S(t)} \Lambda(t) \xrightarrow[\Lambda'(t)]{\Lambda'(t)} \lambda(t) \xrightarrow[\log\{\lambda(t)\}]{\log\{\lambda(t)\}} \eta(t)
 \end{aligned}$$

4.2.3 Survival likelihood contributions, assuming non-informative censoring

$$\begin{aligned}
 p(Y = y, D = d) &= [f_T(y)]^d [S_T(y)]^{1-d} \\
 &= [\lambda_T(y)]^d [S_T(y)]
 \end{aligned}$$

4.2.4 Nonparametric time-to-event distribution estimators

$$\hat{\lambda}_i = \frac{d_i}{n_i}$$

$$\hat{S}_{KM}(t) \stackrel{\text{def}}{=} \prod_{\{i: t_i < t\}} [1 - \hat{\lambda}_i]$$

$$\hat{\Lambda}_{NA}(t) \stackrel{\text{def}}{=} \sum_{\{i: t_i < t\}} \hat{\lambda}_i$$

4.2.5 Proportional hazards model structure

Joint likelihood of data set: $\mathcal{L} \stackrel{\text{def}}{=} p(\tilde{Y} = \tilde{y}, \tilde{D} = \tilde{d} | \mathbf{X} = \mathbf{x})$

Marginal likelihood contribution of obs. i : $\mathcal{L}_i \stackrel{\text{def}}{=} p(Y_i = y_i, D_i = d_i | \tilde{X}_i = \tilde{x}_i)$

Independent Observations Assumption: $\mathcal{L} = \prod_{i=1}^n \mathcal{L}_i$

Non-Informative Censoring Assumption: $T_i \perp\!\!\!\perp C_i | \tilde{X}_i$

$$\mathcal{L}_i \propto [f_T(y_i | \tilde{x}_i)]^{d_i} [S_T(y_i | \tilde{x}_i)]^{1-d_i} = S_T(y_i | \tilde{x}_i) \cdot [\lambda_T(y_i | \tilde{x}_i)]^{d_i}$$

Survival function: $S(t | \tilde{x}) \stackrel{\text{def}}{=} P(T > t | \tilde{X} = \tilde{x}) = \int_{u=t}^{\infty} f(u | \tilde{x}) du = \exp\{-\Lambda(t | \tilde{x})\}$

Probability density function: $f(t | \tilde{x}) \stackrel{\text{def}}{=} p(T = t | \tilde{X} = \tilde{x}) = -S'(t | \tilde{x}) = \lambda(t | \tilde{x}) S(t | \tilde{x})$

Cumulative hazard function: $\Lambda(t | \tilde{x}) \stackrel{\text{def}}{=} \int_{u=0}^t \lambda(u | \tilde{x}) du = -\log\{S(t | \tilde{x})\}$

Hazard function: $\lambda(t | \tilde{x}) \stackrel{\text{def}}{=} p(T = t | T \geq t, \tilde{X} = \tilde{x}) = \Lambda'(t | \tilde{x}) = \frac{f(t | \tilde{x})}{S(t | \tilde{x})}$

Hazard ratio: $\theta(t | \tilde{x} : \tilde{x}^*) \stackrel{\text{def}}{=} \frac{\lambda(t | \tilde{x})}{\lambda(t | \tilde{x}^*)}$

Log-Hazard function: $\eta(t | \tilde{x}) \stackrel{\text{def}}{=} \log\{\lambda(t | \tilde{x})\} = \eta_0(t) + \Delta\eta(t | \tilde{x})$

Proportional Hazards Assumption:

$$\begin{aligned}\lambda(t | \tilde{x}) &= \lambda_0(t) \cdot \theta(\tilde{x}) \\ \Lambda(t | \tilde{x}) &= \Lambda_0(t) \cdot \theta(\tilde{x}) \\ \eta(t | \tilde{x}) &= \eta_0(t) + \Delta\eta(\tilde{x})\end{aligned}$$

Logarithmic Link Function Assumption:

- **Link function:**

$$\begin{aligned}\log\{\lambda(t | \tilde{x})\} &= \eta(t | \tilde{x}) \\ \log\{\theta(\tilde{x})\} &= \Delta\eta(\tilde{x})\end{aligned}$$

- **Inverse link function:**

$$\begin{aligned}\lambda(t | \tilde{x}) &= \exp\{\eta(t | \tilde{x})\} \\ \theta(\tilde{x}) &= \exp\{\Delta\eta(\tilde{x})\}\end{aligned}$$

Linear Predictor Component:

$$\begin{aligned}\eta(t | \tilde{x}) &= \eta_0(t) + \Delta\eta(t | \tilde{x}) \\ \Delta\eta(t | \tilde{x}) &= \tilde{x} \cdot \tilde{\beta}\end{aligned}$$

Linear Predictor Component Functional Form Assumption:

$$\Delta\eta(t | \tilde{x}) = \tilde{x} \cdot \tilde{\beta} \stackrel{\text{def}}{=} \beta_1 x_1 + \dots + \beta_p x_p$$

4.2.6 Proportional hazards model partial likelihood formula:

$$\mathcal{L}_i^* = \frac{\theta(\tilde{x}_i)}{\sum_{k \in R(t_i)} \theta(\tilde{x}_k)}$$
$$\mathcal{L}^* = \prod_{\{i: d_i=1\}} \mathcal{L}_i^*$$

4.2.7 Proportional hazards model baseline cumulative hazard estimator:

$$\hat{\Lambda}_0(t) = \sum_{t_i < t} \frac{d_i}{\sum_{k \in R(t_i)} \theta(x_k)}$$
